Always on guard

Audio warning

- Loud enough to be heard within the corner zone and set it apart from other background noises
- Audio volume can be adjusted or turned off
- Sounds warning ONLY when motion is detected on both sides of the corner

Visual warning

- Flashes warning ONLY when motion is detected on both sides of the corner
- LED lights positioned for maximum visibility
- Beam focused toward areas where it is best seen
- Lens concentrates and increases beam's intensity

Blind corner intersections are a prime spot for accidents in any industrial setting – accidents that can result in damage to equipment, the facility and most importantly to people. Collision Sentry works to prevent accidents at blind corners by sending both an audio and visual alert to warn of approaching traffic.

Collision Sentry helps create a safer working environment in areas where forklift traffic and pedestrian traffic intersect.

Simple installation

- Deploys immediately, portable, compact and lightweight
- Integrated magnet mounts “snap on” to racking
- Z-clips available for mounting to non-magnetic surfaces

Self-powered

- Standard D-cell batteries (included)
- Low battery indicator
- Depending on usage, battery life is estimated at two to three years

Passive infrared motion sensors

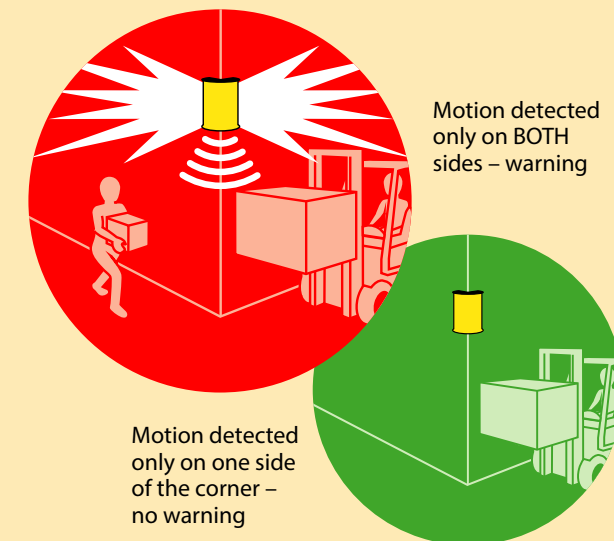

- Detection zone 20-25 feet in each direction
- Warning sent in ample time for corrective action
- Pre-set and ready to use

Collision Sentry Solution

Blind corners and intersections are a common hazard in most industrial settings. The Collision Sentry collision warning system helps to lessen these hazards.

The addition of the Collision Sentry system can:

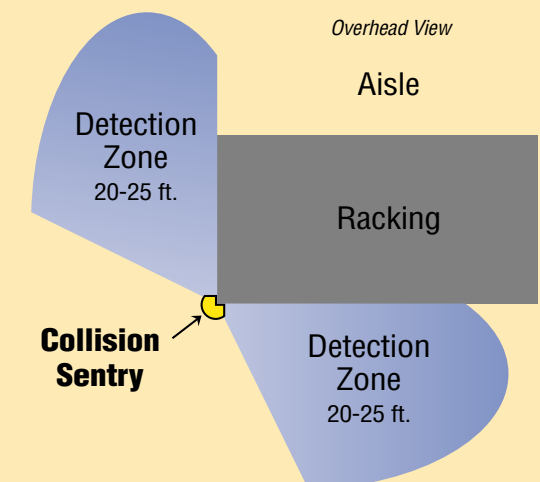

- Protect people from injury
- Prevent equipment damage
- Prevent facility damage
- Increase and maintain productivity by avoiding delays due to accidents

The Collision Sentry only sends a warning when it senses objects moving in both of its detection zones.

It immediately flashes in both directions and sounds an audible warning, providing enough time to take action.

Detection Zone

*Test results may vary depending on facility.
