ITL 5-1

The ITL 5-1 is a RF power triode designed specifically for industrial applications.

This tube uses a coaxial design and metal-ceramic technology. This triode may be operated in CW or pulse modes.

For operation in pulse mode, the parameters depend on each equipment characteristics. Contact us for specific information.

The ITL 5-1 is an air cooled triode.

This product is designed, developed and manufactured at an ISO 9001 registered production site.

(1) At frequencies above 50 MHz, the filament voltage is reduced so that the ratio of filament voltage to current becomes the same as that without an anode voltage.

(2) Measured with a 40 x 40 cm shielding plate attached to the grid plate.

(3) Limited conditions above 30 MHz. Please consult Thales Electron Devices.

Cooling curve

The required flow rates and pressures drop may be read off the cooling curve. This is valid for both air-flow directions.

Pa: anode dissipation

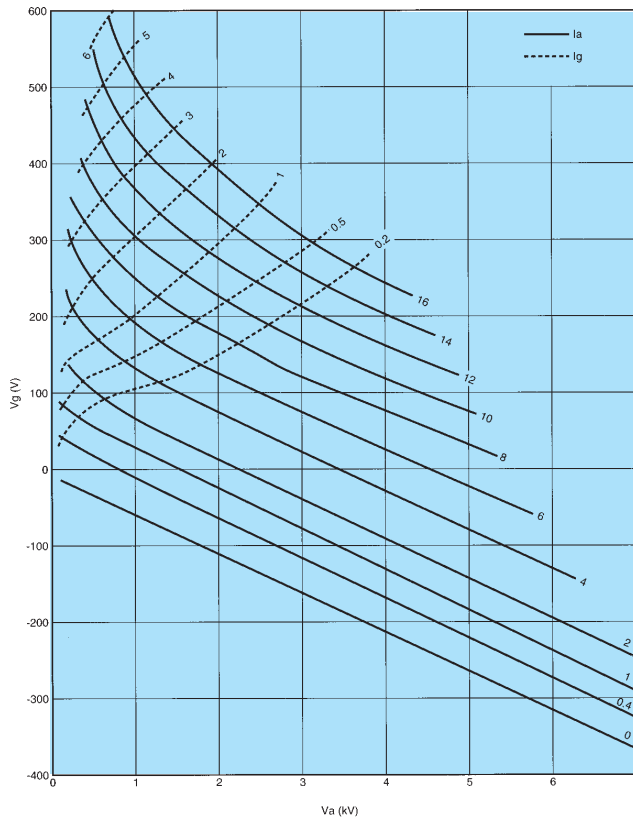

Δp : pressure drop across the cooler fins

q: air flow rate

T_{in} : inlet air temperature
